DIVISION: 06 00 00—WOOD, PLASTICS AND COMPOSITES
Section: 06 17 13—Laminated Veneer Lumber

REPORT HOLDER:
MURPHY ENGINEERED WOOD PRODUCTS DIVISION

EVALUATION SUBJECT:
MURPHY LAMINATED VENEER LUMBER (LVL)

LISTEES:
BLUELINX CORPORATION
EASTERN ENGINEERED WOOD PRODUCTS – STRUCTURE PRO LVL

1.0 EVALUATION SCOPE

1.1 Compliance with the following codes:

For evaluation for compliance with codes adopted by the California Office of Statewide Health Planning and Development (OSHPD) and Division of the State Architect (DSA), see ESR-2913 CBC and CRC Supplement.

For evaluation for compliance with codes adopted by the Los Angeles Department of Building and Safety (LADBS), see ESR-2913 LABC and LARC Supplement.

Property evaluated:
Structural

Evaluation to the following green code(s) and/or standards:
- 2016, California Green Building Standards Code (CALGreen), Title 24, Part 11

Attributes verified:
See Section 3.1.

2.0 USES

Murphy LVL is an alternative to sawn lumber for structural applications including beams, headers, joists and rafters. Murphy LVL is also used for components of built-up structural members, such as flanges for I-joists and chords for trusses.

3.0 DESCRIPTION

3.1 General:
Murphy LVL complies with the requirements noted in Section 2303.1.10 of the 2018 and 2015 IBC (Section 2303.1.9 of the 2012, 2009, and 2006 IBC) for allowable stress design (Section 2301.2). Chapters 5 and 8 of the IRC are applicable to Murphy LVL.

The wood veneer properties and species, adhesive, manufacturing parameters, and finished product thickness, width and length meet the requirements noted in the quality manual that contains the manufacturing standard.

The attributes of the Murphy LVL have been verified as conforming to the provisions of (i) CALGreen Section A4.404.3 for efficient framing techniques; (ii) ICC 700-2015 and ICC 700-2012 Sections 608.1(2), 11.608.1(2) and 12(A),608.1 for resource-efficient materials; and (iii) ICC 700-2008 Section 607.1(2) for resource-efficient materials. Note that decisions on compliance for those areas rest with the user of this report. The user is advised of the project-specific provisions that may be contingent upon meeting specific conditions, and the verification of those conditions is outside the scope of this report. These codes or standards often provide supplemental information as guidance.

3.2 Material:
Murphy LVL is made with layers of wood veneers laminated together using an exterior-type heat durable phenol-formaldehyde adhesive conforming to ASTM D2559. Murphy LVL is available in thicknesses from 1 1/4 inches (32 mm) to 3 1/2 inches (89 mm), depths from 1 1/2 inches (39 mm) to 48 inches (1219 mm), and lengths up to 80 feet (24 m).

4.0 DESIGN AND INSTALLATION

4.1 Design:

4.1.1 General: Murphy LVL is designed as structural composite lumber in accordance with the applicable code and the National Design Specification® for Wood Construction (NDS). Reference design values are as noted in Table 1.

4.1.2 Fasteners: Reference design values for connections must be determined in accordance with the applicable section of the NDS, using the equivalent specific gravities provided in Table 2. Spacing, edge distance and end distance of fasteners installed in the faces and edges of Murphy LVL members must be in accordance with the NDS and are limited as shown in Table 3.

4.2 Installation:
Murphy LVL must be installed in accordance with this evaluation report, applicable building codes and the
specifications of the design professional responsible for the design of the structure. Drawings and/or the manufacturer’s published installation instructions must be available on the jobsite during installation.

5.0 CONDITIONS OF USE

The Murphy LVL described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Calculations and drawings demonstrating compliance with this report must be submitted to the code official. The calculations and drawings must be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.

5.2 The material is limited to conditions in which the average equilibrium moisture content of solid-sawn lumber is less than 16 percent.

5.3 Connections other than the nailed and bolted connections described in this report are outside of the scope of this report.

5.4 Evaluation of the effect of fire-retardant or preservative treatment on LVL is outside the scope of this report.

5.5 Installation, fabrication, identification and connection details must be in accordance with this report, the manufacturer’s published installation instructions and the applicable code. This report must govern if there are conflicts between the manufacturer’s published installation instructions and this report.

5.6 Murphy LVL is produced in Sutherlin, Oregon, under a quality control program with inspections by ICC-ES and APA—The Engineered Wood Association (AA-649).

6.0 EVIDENCE SUBMITTED

Data in accordance with the ICC-ES Acceptance Criteria for Structural Wood-based Products (AC47), dated June 2017 (editorially revised March 2018).

7.0 IDENTIFICATION

7.1 The Murphy LVL must be identified with stamps bearing the Murphy Engineered Wood Division name (or the name of one of the listees noted at the beginning of this report; grade; evaluation report number (ESR-2913); mill number (1089), production shift and date of manufacture; and the name of the inspection agency [APA—The Engineered Wood Association (AA-649)].

7.2 The report holder’s contact information is the following:

For St: 1 psi = 6.9 kPa.

1. The tabulated values are design values for normal duration of load. All values, except for E and F\(_c\), may be adjusted for other load durations as permitted by the code. The design stresses are limited to conditions in which the average equilibrium moisture content of solid-sawn lumber is less than 16 percent.
2. Reference design values must be adjusted, as applicable, in accordance with Section 8.3 of the NDS.
4. The tabulated values are based on a reference depth of 12 inches. For other depths, when loaded edgewise, the allowable bending stress (\(F_b\)) shall be modified by \(3/\left(12/d\right)^{0.18}\), where \(d\) = depth in inches. For depths less than 2\(1/2\) inches, the factor for the 2\(1/2\) -inch depth must be used.
5. Multiple rows must be equally spaced from the centerline of the narrow face axis.
6. Multiple rows in the edge orientation must be spaced 1/2 inch or more from each other and offset one-half of the tabulated minimum nail spacing, as shown in Figure 1.

</tbody>
</table>

For St: 1 inch = 25.4 mm.

1. Edge distance must be sufficient to prevent splitting.
2. 16d sinkers (0.148 inch x 3\(1/4\) inches) may be spaced the same as a 12d common wire nail (0.148 inch x 3\(1/4\) inches).
3. Fastener sizes and closest on-center spacing not specifically described above are beyond the scope of this report.
4. Multiple rows in the edge orientation must be spaced 1\(1/2\) inch or more from each other and offset one-half of the tabulated minimum nail spacing, as shown in Figure 1.
5. Multiple rows must be equally spaced from the centerline of the narrow face axis.
6. Nail penetration for edge nailing must not exceed 2 inches for 16d nails (common or box) or 2\(1/2\) inches for 10d and 12d nails (common or box).
7. Tabulated closest on-center spacing for face orientation is applicable to nails that are installed in rows parallel to the grain (length) of the LVL. For nails installed in rows perpendicular to the direction of grain (width/depth) of the LVL, the closest on-center spacing for face orientation must be sufficient to prevent splitting of the LVL.
8. Not recommended.
9. Minimum end distance may be reduced to 2\(1/2\) inches for single row nailing.
10. Minimum nail spacing may be reduced to 5 inches when the LVL is 1\(1/4\) inches or thicker.

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Murphy LVL, described in ICC-ES evaluation report ESR-2913, has also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:
- 2020 City of Los Angeles Building Code (LABC)
- 2020 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The Murphy LVL, described in Sections 2.0 through 7.0 of the evaluation report ESR-2913, complies with the LABC Chapter 23, and the LARC, and is subject to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The Murphy LVL, described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report ESR-2913.
- The design, installation, conditions of use and identification are in accordance with the 2018 International Building Code® (IBC) provisions noted in the evaluation report ESR-2913.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.

This supplement expires concurrently with the evaluation report ESR-2913, reissued August 2018 and revised May 2020.
1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that the Murphy LVL, recognized in ICC-ES evaluation report ESR-2913, has also been evaluated for compliance with the code(s) noted below.

Applicable code editions:
- 2019 California Building Code (CBC)
- 2019 California Residential Code (CRC)

For evaluation of applicable chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) and Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.

2.0 CONCLUSIONS

2.1 CBC:
The Murphy LVL, described in Sections 2.0 through 7.0 of the evaluation report ESR-2913, complies with CBC Chapter 23, provided the design and installation are in accordance with the 2018 International Building Code® (IBC) provisions noted in the evaluation report, ESR-2913, and the additional requirements of CBC Chapters 16 and 17, as applicable.

The Murphy LVL has not been evaluated under Chapter 7A for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

2.1.1 OSHPD:
The Murphy LVL, described in Sections 2.0 through 7.0 of the evaluation report ESR-2913, complies with CBC amended Chapters 16, 17 and 23, and Chapters 16A and 17A provided the design and installation are in accordance with the 2018 International Building Code® (IBC) provisions noted in the evaluation report, and the additional requirements in Section 2.1.1.1 and 2.1.1.2 of this supplement:

2.1.1.1 Conditions of Use:
1. All loads applied shall be determined by the registered design professional and shall comply with applicable loads and load combinations from CBC Chapter 16 and amendments [OSHPD 1R, 2, 3 and 5] and 16A [OSHPD 1 and 4].
2. Conventional light-frame construction under Section 2308 is permitted in accordance with the additional requirements of CBC Section 2308.2.7 [OSHPD 1R, 2 & 5].
3. Seismic Design Category shall be in accordance with CBC amended Section 1613.1 Exception 6 [OSHPD 1R, 2 & 5].
4. Construction documents shall include detailing and limitations for notches and bored holes in accordance with CBC amended Section 2304.4.1 [OSHPD 1, 1R, 2, 4 and 5].
5. When the product is used as chords for trusses, the additional requirements of Section 2303.4.1.4.1 and Section 2303.4.3.1 [OSHPD 1, 1R, 2, 4 & 5] for construction documents shall apply.

2.1.1.2 Special Inspection Requirement: Special inspection of wood structural elements are required in accordance with CBC amended Section 1705A.5.3 [OSHPD 1 & 4].
2.1.2  DSA:
The Murphy LVL, described in Sections 2.0 through 7.0 of the evaluation report ESR-2913, complies with CBC amended Chapters 16 and 23, and Chapters 16A and 17A provided the design and installation are in accordance with the 2018 *International Building Code*® (IBC) provisions noted in the evaluation report, and the additional requirements in Section 2.1.2.1 and 2.1.2.2 of this supplement:

2.1.2.1  Conditions of Use:
1. All loads applied shall be determined by the registered design professional and shall comply with applicable loads and load combinations from CBC amended sections in Chapter 16 [DSA-SS/CC] and 16A [DSA/SS].
2. Conventional light-frame construction under Section 2308, if applicable, shall comply with the additional requirements of CBC Section 2308.2.7 [DSA-SS and DSA-SS/CC].
3. Construction documents shall include detailing and limitations for notches and bored holes in accordance with CBC amended Section 2304.4.1 [DSA-SS and DSA-SS/CC].
4. When the product is used as chords for trusses, the additional requirements of Section 2303.4.14.1 and Section 2303.4.3.1 [DSA-SS and DSA-SS/CC] for construction documents shall apply.

2.1.2.2  Special Inspection Requirement: Special inspection of wood structural elements are required in accordance with CBC amended Section 1705A.5.3 [DSA-SS and DSA-SS/CC].

2.2  CRC:
The Murphy LVL described in Sections 2.0 through 7.0 of the evaluation report ESR-2913, complies with CRC Chapters 5 and 8, provided the design and installation are in accordance with the 2018 *International Residential Code*® (IRC) provisions noted in the evaluation report, ESR-2913.

The products have not been evaluated under CRC Section R337 for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

The products recognized in this supplement have not been evaluated for compliance with the *International Wildland–Urban Interface Code*®.

This supplement expires concurrently with the evaluation report ESR-2913, reissued August 2018 and revised May 2020.
