Power Preserved Glulam® Beams and Columns
Anthony Forest Products/Canfor

Products: Power Preserved Glulam® Beams and Columns
Anthony Forest Products Company, LLC, 295 Cooper Drive, El Dorado, AR 71730
(800) 221-2326
www.anthonyforest.com

1. Basis of the product report:
     Alternative materials and 2303.1.3 Structural glued laminated timber
   - 2021, 2018, and 2015 International Residential Code (IRC): Sections R104.11 Alternative
     materials, and R502.1.3, R602.1.3, and R802.1.2 Structural glued laminated timber
   - 2012 IRC: Sections R104.11 Alternative materials, and R502.1.5, R602.1.2, and
     R802.1.4 Structural glued laminated timber
   - ANSI 117-2020 and ANSI 117-2015 recognized in the 2021 IBC and IRC, and 2018 IBC
     and IRC, respectively
     2021 and 2018 IBC and IRC, 2015 IBC and IRC, and 2012 IBC and IRC, respectively
   - ASTM D3737-18e1, D3737-12, and D3737-08 recognized in the 2021 IBC and IRC, 2018
     and 2015 IBC and IRC, and 2012 IBC and IRC, respectively
   - AWPA U1-20, U1-16, U1-14, and U1-11 recognized in the 2021, 2018, 2015, and 2012
     IBC and IRC, respectively

2. Product description:
   Power Preserved Glulam® Beams are used as beams, headers, rafters, or purlins, and are
   manufactured with 24F-V5M1/SP balanced layup combination in accordance with ANSI
   A190.1. Power Preserved Glulam Columns are manufactured with Combination #50 layup
   in accordance with ANSI A190.1. Power Preserved Glulam Beams are treated with Cop-
   Guard® (CuN) at 0.04 pcf or Clear-Guard™ (IPBC/PER) at 0.055 pcf for above ground use
   by Hoover Treated Wood Products, Inc. (www.frtw.com) after manufacturing. Power
   Preserved Glulam Columns are treated with Cop-Guard at 0.075 pcf. The efficacy of the
   preservative treatment, and post-treatment inspection and quality assurance of the
   treatment are outside the scope of this report and the APA certification program. The
   adhesive used in Power Preserved Glulam Beams and Columns, as trademarked by APA,
   conforms to wet-use requirements of ASTM D2559.

3. Design properties:
   Table 1 lists the design properties for Power Preserved Glulam Beams. The allowable
   spans for Power Preserved Glulam Beams shall be in accordance with the
   recommendations provided by the manufacturer (www.anthonyforest.com/assets/pdf/power-
   preserved-glulam-load-and-design-tables.pdf) and APA Data File: Glued Laminated Beam
   Design Tables, Form S475 (www.apawood.org/resource-library), as applicable. Table 2 lists
   the design properties for Power Preserved Glulam Columns. The allowable loads for Power
   Preserved Glulam Columns shall be in accordance with the recommendations provided by
   the manufacturer (www.anthonyforest.com/assets/pdf/power-column-flyer.pdf), and APA
   Data File: Design of Structural Glued Laminated Timber Columns, Form Y240 (see link
   above), as applicable.

4. Product installation:
   Power Preserved Glulam Beams and Columns shall be installed in accordance with the
   recommendations provided by the manufacturer and APA Construction Guide: Glulam
Connection Details, Form T300, and APA Technical Note: Preservative Treatment of Glued Laminated Timber, Form S580 (see link above). Permissible field notching and drilling shall be in accordance with the recommendations provided by the manufacturer and APA Technical Note: Field Notching and Drilling of Glued Laminated Timber Beams, Form S560 (see link above).

The American Wood Protection Association (AWPA) U1 Standard Specification F permits glulam members treated with Cop-Guard (CuN) at a retention level of 0.04 pcf and Clear-Guard (IPBC/PER) at 0.055 pcf for use in AWPA use categories UC3A and UC3B for above ground applications. AWPA U1 Standard Specification F permits glulam members treated with Cop-Guard (CuN) at a retention level of 0.075 pcf to be used in AWPA use categories UC4B and UC4C for ground contact applications.

5. Fire-rated assemblies:
Design of fire-resistant exposed wood members in accordance with Chapter 16 of the National Design Specification for Wood Construction (NDS), Section 722.1 of the 2021, 2018, and 2015 IBC, or Section 722.6.3 of the 2012 IBC shall be applicable to Power Preserved Glulam Beams and Columns. Fire-rated assemblies shall be constructed in accordance with the recommendations provided by the manufacturer and APA Design/Construction Guide: Fire-Rated Systems, Form W305 (see link above).

6. Limitations:
   a) Power Preserved Glulam Beams and Columns shall be designed in accordance with the code using the design properties specified in this report.
   b) Power Preserved Glulam Beams and Columns shall have a minimum depth of 4 and 2 laminations, respectively.
   c) Power Preserved Glulam Beams treated with Cop-Guard at 0.04 pcf and Clear-Guard at 0.055 pcf retention are permitted for above ground use and shall not be used in direct ground contact, water or marine applications. Power Preserved Glulam Beams treated with Clear-Guard shall not be installed in interior applications until the preservative solvents have been completely volatilized. Power Preserved Glulam beams treated with Cop-Guard shall not be installed in interior applications.
   d) Power Preserved Glulam Columns treated with Cop-Guard at 0.075 pcf retention is permitted for use in ground contact but shall not be used in direct water or marine applications. Power Preserved Glulam Columns treated with Cop-Guard shall not be installed in interior applications.
   e) Power Preserved Glulam Beams and Columns are produced at Anthony Forest Products Company, LLC, El Dorado, AR and Washington, GA, under a quality assurance program audited by APA prior to treatment. The efficacy of the treatment and overall post-treatment inspection and quality assurance program is certified by the treating company and third-party inspection provided by Timber Products Inspection (TPI).
   f) This report is subject to re-examination in one year.

7. Identification:
Power Preserved Glulam Beams and Columns described in this report are identified by a label bearing the manufacturer's name (Anthony Forest Products Company, LLC) and/or trademark, the APA assigned plant number (1079 for El Dorado, AR and 1080 for Washington, GA), the product standard (ANSI A190.1), the APA logo, the report number PR-L282, the preservative treatment by Hoover, the retention level in pcf, the AWPA use category and a means of identifying the date of manufacture.

* The combinations in this table are intended primarily for members stressed in bending due to loads applied perpendicular to the wide faces of the laminations. Allowable design values are tabulated, however, for loading both perpendicular and parallel to the wide faces of the laminations.  
** The tabulated allowable design values are for normal duration of loading. For other durations of loading, see the applicable building code. The tabulated allowable design values are for dry conditions of use. For wet conditions of use, multiply the tabulated values by the wet-use factors shown at the bottom of the table.  
† The unbalanced (U) layup is intended primarily for simple-span applications and the balanced (B) layup is intended primarily for continuous or cantilevered applications.  
‡ The values of F_{ux} are based on members 5-1/8 inches in width by 12 inches in depth by 21 feet in length. For members with a larger volume, F_{ux} shall be multiplied by a volume factor, C_{v} = (5.125/b)^{1/2} \times (12/d)^{1/2}, where b is the beam width (in.), d is the beam depth (in.), and L is the beam length between the points of zero moment (ft).  
§ For non-prismatic members, members subject to impact or cyclic loading, or shear design of bending members at connections (NDS 3.4.3.3), the F_{ux} and F_{uy} values shall be multiplied by a factor of 0.72. The tabulated F_{ux} values are for timbers with laminations made from a single piece of lumber across the width or multiple pieces that have been edge bonded. For timbers manufactured from multiple piece laminations (across width) that are not edge bonded, value shall be multiplied by 0.4 for members with 5, 7, or 9 laminations or by 0.5 for all other members.  
¶ The tabulated E values include true E (also known as "shear-free E"), apparent E, and E for beam stability calculation (NDS 3.3.3.8). For calculating beam deflections, the tabulated E values shall be used unless the shear deflection is determined in addition to bending deflection based on the tabulated E_{ux}. The axial modulus of elasticity, E_{ax}, is equal to the tabulated E_{ux} and E_{uy} values.  
∥ The values of F_{ux} are based on members 12 inches in depth. For depths less than 12 inches, F_{ux} shall be permitted to be increased by multiplying by the flat use factor, (12/d)^{1/2}, where d is the beam depth in inches. When d is less than 3 inches, use the size adjustment factor for 3 inches.  
** The tabulated values are for normal duration of loading. For other durations of loading, see the applicable building code.

\(^{(1)}\) The tabulated allowable design values are for normal duration of loading. For other durations of loading, see applicable building code. The tabulated allowable design values are for dry conditions of use. For wet conditions of use, multiply the tabulated values by the factors shown at the bottom of the table.

\(^{(2)}\) SP = Southern pine.

\(^{(3)}\) The tabulated E values include shear-free (true) modulus of elasticity (E\(_{\text{true}}\), E\(_{\text{true}}\), and E\(_{\text{true}}\)), apparent modulus of elasticity (E\(_{\text{app}}\) and E\(_{\text{app}}\)), and 5th percentile modulus of elasticity (E\(_{\text{axial}}\), E\(_{\text{axial}}\), and E\(_{\text{axial}}\)). For column stability calculation (NDS 3.7.1), E\(_{\text{axial}}\) shall be used. For calculating the total deflection due to bending, the tabulated E\(_{\text{app}}\) or E\(_{\text{app}}\) values shall be used, or as an alternative, the true (shear-free) bending deflection shall be calculated using the tabulated E\(_{\text{true}}\) or E\(_{\text{true}}\), which shall be added to the calculated shear deflection to determine the total deflection due to bending.

\(^{(4)}\) The values of F\(_{\text{fut}}\) are based on members 12 inches in depth. For depths less than 12 inches, F\(_{\text{fut}}\) shall be permitted to be increased by multiplying by the flat use factor, (12/d)\(^{0.5}\), where d is the beam depth in inches. When d is less than 3 inches, use the size adjustment factor for 3 inches.

\(^{(5)}\) For non-prismatic members, notched members, members subject to impact or cyclic loading, or shear design of bending members at connections (NDS 3.4.3.3), the tabulated F\(_{\text{fut}}\) and F\(_{\text{fut}}\) values shall be multiplied by 0.72.

\(^{(6)}\) The tabulated F\(_{\text{fut}}\) values are for members of 4 or more lams. The tabulated F\(_{\text{fut}}\) values shall be multiplied by a factor of 0.95 for 3 lams and 0.84 for 2 lams. For members with 5, 7, or 9 lams manufactured from multiple-piece lams with unbounded edge joints, the tabulated F\(_{\text{fut}}\) values shall be multiplied by a factor of 0.4. For all other members manufactured from multiple-piece lams with unbounded edge joints, the tabulated F\(_{\text{fut}}\) values shall be multiplied by a factor of 0.5. This adjustment shall be cumulative with the adjustment specified in Footnote 5.

\(^{(7)}\) The values of F\(_{\text{fut}}\) are based on members 5-1/8 inches in width by 12 inches in depth by 21 feet in length. For members with a larger volume, F\(_{\text{fut}}\) shall be multiplied by a volume factor, C\(_{\text{v}}\) = (5.125b)^0.73 (12/c)^0.05 (L/21)^0.73, where b is the beam width (in.), c is the beam depth (in.), and L is the beam length between the points of zero moment (ft).

\(^{(8)}\) The tabulated F\(_{\text{fut}}\) values are for members without special tension lams up to 15 inches in depth. If the member depth is greater than 15 inches without special tension lams, the tabulated F\(_{\text{fut}}\) values must be multiplied by a factor of 0.68. If special tension lams are used, the tabulated F\(_{\text{fut}}\) values are permitted to be increased by a factor of 1.18 regardless of the member depth provided that the increased F\(_{\text{fut}}\) value does not exceed 2,400 psi. This factor shall be cumulative with the volume factor, C\(_{\text{v}}\), specified in Footnote 7.
APA – The Engineered Wood Association is an approved national standards developer accredited by American National Standards Institute (ANSI). APA publishes ANSI standards and Voluntary Product Standards for wood structural panels and engineered wood products. APA is an accredited certification body under ISO/IEC 17065 by Standards Council of Canada (SCC), an accredited inspection agency under ISO/IEC 17020 by International Code Council (ICC) International Accreditation Service (IAS), and an accredited testing organization under ISO/IEC 17025 by IAS. APA is also an approved Product Certification Agency, Testing Laboratory, Quality Assurance Entity, Validation Entity, and Product Evaluation Entity by the State of Florida, and an approved testing laboratory by City of Los Angeles.
