1. Basis of the product report:
  - 2015 National Building Code of Canada (NBCC): Clause 1.2.1.1 of Division A and Clauses 4.1, 4.3.1, 9.23.4.2, and 9.23.10.1 of Division B
  - CSA O86-14 (reprint 2016) Engineering Design in Wood
  - CSA O122-16 Structural Glued Laminated Timber
  - CSA O177-06 (R2015) Qualification Code for Manufacturers of Structural Glued-Laminated Timber
  - APA Reports T2001P-85, T2003P-21, T2004P-43, T2005P-74, T2006P-45, T2008P-91, T2009P-39, and T2012P-41, FPInnovations Reports 201003404, 201003409, 201005209, 301008842, 301009694, and 301011496, and other qualification data
2. Product description:

Nordic Lam™ is a Black Spruce structural glued laminated timber manufactured in accordance with 20F-E8M1, 20F-ES/CPG, 24F-E/ES1M1, 24F-ES/MSR, 24F-ES/NPG, ES11, ES11/NPG, ES12, and ES12/NPG layup combinations developed in accordance with the principle of ASTM D3737. Nordic Lam is used as beams, headers, rafters, purlins, columns, studs, and decking, and is manufactured in nominal widths ranging from 38 to 327 mm (1-1/2 to 12-7/8 inches), a variety of depths, and lengths up to 24.4 meters (80 feet), in accordance with Table 1.
3. Design properties:

Table 2 lists the engineering properties for Nordic Lam beams. The maximum design loads for Nordic Lam beams shall be in accordance with the recommendations provided by the manufacturer ([www.nordic.ca/data/files/datasheet/file/N-C221BeamsandHeadersJune2013.pdf](http://www.nordic.ca/data/files/datasheet/file/N-C221BeamsandHeadersJune2013.pdf)).

Table 3 lists the engineering properties for Nordic Lam columns. The maximum design loads for Nordic Lam columns shall be in accordance with the recommendations provided by the manufacturer ([www.nordic.ca/data/files/datasheet/file/N-C231ColumnsJune2013.pdf](http://www.nordic.ca/data/files/datasheet/file/N-C231ColumnsJune2013.pdf)).
4. Product installation:

Nordic Lam beams and columns shall be installed in accordance with the recommendations provided by the manufacturer ([www.nordic.ca/data/files/datasheet/file/N-C121\\_Nordic\\_Lam\\_April\\_2014.pdf](http://www.nordic.ca/data/files/datasheet/file/N-C121_Nordic_Lam_April_2014.pdf)) and APA Technical Note: *Glulam Connection Details*, Form T300 ([www.apawood.org/resource-library](http://www.apawood.org/resource-library)). Permissible field notching and drilling of Nordic Lam beams shall be in accordance with the recommendations provided by the manufacturer and APA Technical Note: *Field Notching and Drilling of Glued Laminated Timber Beams*, Form S560 (see link above). Permissible field notching and drilling of Nordic Lam columns shall be in accordance with the recommendations provided by the manufacturer.

5. Fire-rated assemblies:

Fire-rated assemblies shall be constructed in accordance with the recommendations provided by the manufacturer (see link above). Procedures specified in Annex B of the 2014 CSA O86 (reprint 2016) may be considered in designing glulams exposed to fire up to 2 hours when permitted by the authority having jurisdiction. The fire-resistance rating shall be evaluated in accordance with Appendix D-2.11 of the 2015 National Building Code of Canada (NBC).

Nordic Lam has been tested in accordance with CAN/ULC S102 and meets the flame-spread rating of 26 – 75 and smoke developed classification of 0 – 450.

6. Limitations:

- a) Nordic Lam beams and columns shall be designed in accordance with the code using the engineering properties specified in this report.
- b) The dimensions of Nordic Lam beams and columns shall follow those specified in Table 1.
- c) Nordic Lam beams and columns shall be manufactured in accordance with layup combinations specified in APA *Glulam Layup Combinations*, Form Y117 SUP (see link above) or proprietary Nordic Lam manufacturing specifications documented in the in-plant manufacturing standard approved by APA.
- d) Nordic Lam is produced at the Nordic Engineered Wood, Chibougamau, Quebec facilities under a quality assurance program audited by APA.
- e) This report is subject to re-examination in one year.

7. Identification:

Nordic Lam described in this report is identified by a label bearing the manufacturer's name (Nordic Structures) and/or trademark, the APA assigned plant number (1057), the APA logo, the combination symbol, the report number PR-L294, and a means of identifying the date of manufacture.

Table 1. Dimensions for Nordic Lam layups.

Layup	Minimum width, b (mm)	Maximum width, b (mm)	Minimum depth	Maximum depth, h (mm)
20F-E8M1	38	191	4 lams	457
20F-ES/CPG	79 <sup>(1)</sup>	89	4 lams	457
24F-E/ES1M1	38	191	4 lams	914 <sup>(2)</sup>
24F-ES/MSR	79	89	4 lams	914 <sup>(2)</sup>
24F-ES/NPG	38	508	4 lams	NA <sup>(2)</sup>
ES11	38	191	2 lams	381
ES11/NPG	38	191	2 lams	381
ES12	38	191	2 lams	381
ES12/NPG	38	508	2 lams	1,372 <sup>(2)</sup>

<sup>(1)</sup> The minimum width shall be permitted to be 38 mm when 24F-ES/NPG is trademarked as 20F-ES/CPG.

<sup>(2)</sup> The maximum depth shall not exceed the tabulated depth or a depth-to-width ratio of 12:1, whichever is smaller.

Table 2. Specified Strengths (MPa) and Relative Density for Nordic Lam Beams<sup>(1,2,3)</sup>

Stress grade	20F-1.9E	20F-1.6E	24F-1.9E	24F-1.9E	24F-1.9E	Wet-Use Factor

Tension perpendicular to grain ( $F_{tp}$ )	0.51	0.51	0.51	0.51	0.51	0.85
Modulus of elasticity ( $E_{axial}$ )	13,100	9,700	11,000	13,100	11,000	0.90
<b>Connections Design</b>						
Mean oven-dry relative density (G)	0.42	0.42	0.42	0.47	0.42	–

- (1) The combinations in this table are applicable to members consisting of 4 or more laminations, unless otherwise noted.  
 (2) Design of glulam members shall be in accordance with CSA O86, Engineering Design in Wood (Limit States Design).  
 (3) The tabulated design values are for standard-term load duration and dry conditions of use. For other load durations, see applicable design code. For wet conditions of use, multiply the tabulated values by the wet-use factors shown in the rightmost column of the table.  
 (4) Specified longitudinal shear has been adjusted to a 2.0 m<sup>3</sup> of beam volume.  
 (5) The tabulated apparent E values have already included a 5% shear deflection.  
 (6) The  $F_{cp}$  value is applicable to glulam members made with manufactured lumber. Otherwise, the  $F_{cp}$  value shall be 7.0 MPa.  
 (7) In calculating the size factor for bending,  $K_{zb}$ , the beam width, b, must be taken as the full member width (mm).  
 (8) In calculating the factored fracture shear resistance at a notch on the tension side at a support,  $F_r$ , the effective lamination width,  $b_{eff}$ , must be taken as the beam width (mm).

Modulus of elasticity ( $E_{axial}$ )	11,000	11,000	13,100	13,100	0.90
<b>Connections Design</b>					
Mean oven-dry relative density (G)	0.42	0.42	0.42	0.47	–

(1) The combinations in this table are applicable to members consisting of 4 or more laminations, unless otherwise noted.  
 (2) Design of glulam members shall be in accordance with CSA O86, Engineering Design in Wood (Limit States Design).  
 (3) The tabulated design values are for standard-term load duration and dry conditions of use. For other load durations, see applicable design code. For wet conditions of use, multiply the tabulated values by the wet-use factors shown in the rightmost column of the table.  
 (4) Specified longitudinal shear has been adjusted to a 2.0 m<sup>3</sup> of beam volume.  
 (5) The tabulated apparent E values have already included a 5% shear deflection.  
 (6) When the member depth is greater than 381 mm (15 inches), the tabulated  $F_{bx}$  values shall be multiplied by a factor of 0.88.  
 (7) The  $F_{cp}$  value is applicable to glulam members made with manufactured lumber. Otherwise, the  $F_{cp}$  value shall be 7.0 MPa.

*APA – The Engineered Wood Association* is an approved national standards developer accredited by American National Standards Institute (ANSI). APA publishes ANSI standards and Voluntary Product Standards for wood structural panels and engineered wood products. APA is an accredited certification body under ISO/IEC 17065 by Standards Council of Canada (SCC), an accredited inspection agency under ISO/IEC 17020 by International Code Council (ICC) International Accreditation Service (IAS), and an accredited testing organization under ISO/IEC 17025 by IAS. APA is also an approved Product Certification Agency, Testing Laboratory, Quality Assurance Entity, and Validation Entity by the State of Florida, and an approved testing laboratory by City of Los Angeles.
