1. Basis of the product report:
     Alternative materials, 703 Fire-Resistance Ratings and Fire Tests, 721 Prescriptive Fire
     Resistance, 722.6 Wood assemblies, and 2303.1.2 Prefabricated wood I-joists
   - 2021, 2018, and 2015 International Residential Code (IRC): Sections R104.11 Alternative
     materials, and R502.1.2 and R802.1.8 (2021 and 2018 IRC only) Prefabricated wood I-
     joists
   - 2012 IRC: Sections R104.11 Alternative materials, R502.1.4 Prefabricated wood I-joists,
     and R501.3 Fire protection of floors
   - 2020 National Building Code of Canada (NBC): Clause 1.2.1.1 of Division A, Clauses
     3.1.7, 4.1, 4.3.1.1, 9.10.3.1, 9.11, and 9.23.4.2 of Division B, Table 9.10.3.1.B, and
     Appendix D
   - ASTM D5055-16, D5055-13e1, D5005-13, and D5055-09 recognized in the 2021 IBC
     and IRC, 2018 IBC and IRC, 2015 IBC and IRC, and 2012 IBC and IRC, respectively
   - ASTM D7672-14e1, ASTM D7672-14 and ASTM D7672-12 recognized in the 2021 IBC
     and IRC, 2018 IBC and IRC, and 2015 IRC and IRC, respectively
     Wall and Floor/Ceiling Assemblies
   - APA System Report SR-405
   - ICC-ES/APA ESR-1305 and ESR-2403
   - CCMC 11518-R, 12412-R, 13308-L, and 13319-R
   - APA Product Reports PR-L238, PR-L238(C), PR-L280, and PR-L280(C)
   - ASTM E119 and CAN/ULC S101 full-scale fire test reports, and engineering analyses

2. Product description:
   PWI Joists covered in this report, as described in Table 1, are made with laminated veneer
   lumber (LVL) or lumber flanges and oriented strand board (OSB) webs in accordance with
   the in-plant manufacturing standard approved by APA. SolidStart LVL rim boards covered in
   this report are made with LVL in accordance with ASTM D7672 and the in-plant
   manufacturing standard approved by APA.

3. Design properties:
   Design properties for PWI Joists are provided in ICC-ES/APA ESR-1305 and APA PR-L238
   in the U.S., and CCMC 12412-R and APA PR-L238(C) in Canada. Design properties for
   SolidStart LVL rim boards are provided in ICC-ES/APA ESR-2403 and APA PR-L280 in the
   U.S., and CCMC 11518-R and 13319-R, and APA PR-L280(C) in Canada.

4. Product installation:
   PWI Joists and SolidStart LVL rim boards covered in this report shall be installed in
   accordance with the recommendations provided by the manufacturer
   (https://pacificwoodtech.com). The Rim Board protection provided by the gypsum board as
   shown in Assemblies RB1 through RB6 in this report shall be continuous when the Rim
   Board is parallel to the floor joists. When the floor joists are perpendicular to the Rim Board,
   the gypsum board protection is permitted to be continuous or discontinuous. When the Rim
   Board protection is discontinuous due to interruption from the floor joists, the floor joists
   must abut the continuous Rim Board, and the required gypsum protection must abut the
floor joists with gaps of no greater than 1/16 inch. When the floor joists are I-joists, the
gypsum protection must be notched to abut the I-joist flanges and web with gaps no greater
than 1/16 inch, or the space between the I-joist web and the gypsum protection must be
filled with a web filler attached to the web with a gap of no greater than 1/16 inch between
the web filler and the I-joist flanges and between the gypsum protection and the web filler.

5. Fire-rated assemblies:
PWI Joists and SolidStart LVL rim boards covered in this report have been shown through
testing and engineering analysis to achieve the fire resistance ratings described in this
report. Fire-rated assemblies for PWI Joists and SolidStart LVL rim boards shall be
constructed in accordance with the prescriptive requirements provided in this report or
recommended by the manufacturer (see link above). In addition, LPI Series I-joists shall be
permitted for use in the fire-rated assemblies described in Sections of ICC-ES/APA ESR-
1305, when installed in accordance with the requirements specified therein.

6. Fire-protection of floors:
PWI Joists with a minimum depth of 9-1/2 inch, as shown in Table 2, when installed and
protected as specified in APA System Report SR-405 (www.apawood.org/resource-library),
and FP-11 shown in this report, meet the requirements of the 2021, 2018, and 2015 IRC
Section R302.13 and the 2012 IRC Section R501.3 or are alternatives to the 2-by-10
dimension lumber prescribed in Exception 4 to the 2021, 2018, and 2015 IRC Section
R302.13 and the 2012 IRC Section R501.3 with demonstrated equivalent fire performance.

7. Limitations:
a) PWI Joists covered in this report shall be designed in accordance with the code using
the design properties specified in ICC-ES/APA ESR-1305 and APA PR-L238 in the U.S.,
and CCMC 12412-R and APA PR-L238(C) in Canada. SolidStart LVL rim boards
covered in this report shall be designed in accordance with the code using the design
properties specified in ICC-ES/APA ESR-2403 and APA PR-L280 in the U.S., and
CCMC 11518-R and APA PR-L280(C) in Canada.
b) PWI Joists and SolidStart LVL rim boards covered in this report are limited to dry service
conditions where the average equilibrium moisture content of sawn lumber is less than
16% in the U.S. and the average equilibrium moisture content of solid-sawn lumber over
a year is 15% or less and does not exceed 19% in Canada.
c) PWI Joists and SolidStart LVL rim boards covered in this report are permitted for use in
fire-rated assemblies that meet the fire-resistance rating in accordance with the
calculation method specified in NBC Appendix D-2.3.
d) PWI Joists covered in this report are produced at Pacific Woodtech Corporation facility
in Red Bluff, California, Resolute Engineered Wood Larouche Inc.’s facility in Larouche,
Quebec, and Resolute Engineered Wood St. Prime Limited Partnership’s facility in St.-
Prime, Quebec, under a quality assurance program audited by APA.
e) SolidStart LVL rim boards covered in this report are produced at Pacific Woodtech
Corporation facility in Golden, British Columbia, Canada, under a quality assurance
program audited by APA.
f) This report is subject to re-examination in one year.

8. Identification:
PWI Joists I-joists and SolidStart LVL rim boards covered in this report are identified by a
label bearing the manufacturer’s name (Pacific Woodtech Corporation) and/or trademark,
the APA assigned plant number (1066 for the Golden plant, 1069 for the Red Bluff plant,
1068 for the Larouche plant of Resolute Engineered Wood Larouche Inc., and 1077 for the
St. Prime plant of Resolute Engineered Wood St. Prime Limited Partnership), the product
series or grade, the APA logo, and a means of identifying the date of manufacture.

太平洋木工技术公司装配 PWI1.1
一小时防火耐火地板/天花板装配

此防火设计符合国际建筑规范（IBC）和
美国木材委员会的《代码接受设计》（DCA）3

最小深度9-1/4英寸（235 mm）：LPI 42Plus/PWI 42S，LPI 52Plus/PWI 52S，和LPI 56/PWI 56L I-Joists

A. 基本装配

1) 铺装品（可选）：变化（参考音效等级，如果适用）。
2) 铺装材：最小23/32英寸（18 mm）T&G 木结构面板。须在铺装材底部添加由I-Joist到铺装材的边缘的连接材料。铺装材须根据代码要求安装。
3) 隔热材料：最小1-1/2英寸（38 mm）矿物羊毛绝缘材料。安装在底梁下并用支架支撑。两头须对齐。
4) 结构构件：最小9-1/4英寸（235 mm）的I-Joist。最大24英寸（610 mm）的间隔。最小翼厚度1-1/2英寸（38 mm），翼面积至少3,387平方英寸（3,387 mm²）。最小翼厚度3/8英寸（9.5 mm）。
5) 铺装条：最小0.026英寸（0.66 mm）形状的钢条，垂直于I-joist的底面，用1-5/8英寸（41 mm）的S型干墙螺钉固定。每16英寸（406 mm）需一节。
6) 天花板：一层5/8英寸（16 mm）的Gypsum Wallboard。安装在铺装条和干墙材料上，用1-1/8英寸（29 mm）的S型干墙螺钉固定。接近每个墙板的端部。

b) 完成：面层的接缝须用胶带覆盖。螺钉头也须用胶带覆盖。

B. 声音等级

(a) 声音等级来自美国木材委员会的《代码接受设计》（DCA）3，可从www.awc.org/获得。
(b) STC和IIC值是通过1.5英寸（38 mm）厚的矿物羊毛绝缘材料为基础的工程分析得出的。括号里的值是基于3.5英寸（89 mm）厚的矿物羊毛绝缘材料。
(c) STC和IIC值适用于16英寸（406 mm）的I-Joist间隔。

C. 相似装配

1) 2012/2015/2018/2021 IBC 表721.1(3) 项24-1.1，以及DCA 3 WIJ-1.1。
2) 适用于达到防火等级的装配，与NBC表9.10.3.1.-B或DCA第2.3节的计算方法。

* This assembly may also be used in a fire-rated roof/ceiling assembly, but only when constructed exactly as described.
Pacific Woodtech Corporation Assembly PWI1.2
One-Hour Fire Resistance Rated Floor/Ceiling Assembly*

This fire resistance design is listed in accordance with the International Building Code (IBC) and American Wood Council's Design for Code Acceptance (DCA) 3
Min. 9-1/4 inches (235 mm) Deep: LPI 42Plus/PWI 42S (depths > 16 inches), LPI 52Plus/PWI 52S, and LPI 56/PWI 56L

I-Joists

A. BASIC ASSEMBLIES
1) Floor Topping (Optional): Varies (reference sound ratings if applicable).
2) Floor Sheathing: Min. 23/32-inch (18-mm) T&G Wood Structural Panel. A construction adhesive must be applied to the top of the joists prior to placing sheathing. The sheets shall be installed with their long edge perpendicular to the joists with end joints centered over the top flange of joists. Floor sheathing must be installed per code requirements.
3) Insulation: Min. 1-1/2-inch (38-mm) Mineral Wool Insulation Batts (min. 2.5 pcf). Installed adjacent to the bottom flange of the I-joist and supported by the resilient channels. The ends of the batts shall be centered over resilient channels.
4) Structural Members: Min. 9-1/4 inches (235 mm) Deep I-Joists. Max. 24 inches (610 mm) on center spacing. Min. flange thickness of 1-1/2 inches (38 mm) and each flange area of at least 5.25 inches² (3,387 mm²). Min. web thickness of 7/16 inch (11 mm).
5) Resilient Channels: Min. 0.019-inch (0.5-mm) Galvanized Resilient Channels. Attached perpendicular to the bottom flange of the I-joist with 1-5/8-inch (41-mm) Type S drywall screws. Channels are spaced a max. of 16 inches (406 mm) on center, are doubled at each wallboard end joint, and extend to the next joist beyond each joint.
6) Ceiling: One layer of 5/8-inch (16-mm) Type C Gypsum Wallboard. Installed with long dimension perpendicular to resilient channels and fastened with min. 1-inch (25-mm) Type S drywall screws spaced at 12 inches (305 mm) on center on intermediate joists and 8 inches (203 mm) on center at end joints, and 3/4 inch (19 mm) from wallboard edges and ends. The end joints of the wallboard must be staggered.
a) Finish: The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

4) Ceiling: Two layers of 1/2-inch (13-mm) Type C Gypsum Wallboard.
   a) Base Layer: Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists using 1-inch (25-mm) Type S drywall screws at 12 inches (305 mm) on center. The end joints of the wallboard must be centered on the bottom flange of the joist and must be staggered.
   b) Face Layer: Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists through the base layer using 1-5/8-inch (41-mm) Type S drywall screws spaced at 12 inches (305 mm) on center on intermediate joists and 8 inches (203 mm) on center at end joints. The longitudinal joints of this layer must be offset 24 inches (610 mm) from those of the base layer. The end joints must be centered on the bottom flange of the joists and offset a min. of 48 inches (1219 mm) from those of the base layer. Additionally, face layer end joints are attached to the base layer with 1-1/2-inch (38-mm) Type G drywall screws at 8 inches (203 mm) on center with a 4-inch (102-mm) stagger, placed 6 inches (152 mm) either side of the joint.
   c) Finish: The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

C. SIMILAR ASSEMBLIES
1) DCA 3 WIJ-1.5.
2) Assemblies that meet the fire-resistance rating in accordance with NBC Table 9.10.3.1.-B or the calculation method specified in NBC Appendix D-2.3.

* This assembly may also be used in a fire-rated roof/ceiling assembly, but only when constructed exactly as described.
Pacific Woodtech Corporation Assembly PW1.6
One-Hour Fire Resistance Rated Floor/Ceiling Assembly* †

This fire resistance design is listed in accordance with American Wood Council’s Design for Code Acceptance (DCA) 3

A. BASIC ASSEMBLIES
1) Floor Topping (Optional): Varies (reference sound ratings if applicable).
2) Floor Sheathing: Min. 23/32-inch (18-mm) T&G Wood Structural Panel. The sheets shall be installed with their long edge perpendicular to the joists with end joints centered over the top flange of joists. Floor sheathing must be installed per code requirements.
3) Structural Members: Min. 9-1/2 inches (241 mm) Deep I-Joists. Max. 24 inch (610 mm) on center spacing. Min. flange thickness of 1-5/16 inches (33 mm) and each flange area of at least 1.95 inches² (1,258 mm²). Min. web thickness of 3/8 inch (9.5 mm).
4) Resilient Channels †: Min. 0.019-inch (0.5-mm) Galvanized Resilient Channels. Attached perpendicular to the bottom flange of the I-joist with 1-1/4-inch (32-mm) Type S drywall screws. Channels are spaced a max. of 16 inches (406 mm) on center (24 inches or 610 mm when I-joists are spaced a max. of 16 inches or 406 mm on center), are doubled at each base layer wallboard end joint, and extend to the next joist beyond each joint.
5) Ceiling: Two layers of 1/2-inch (13-mm) Type X Gypsum Wallboard.
   a) Base Layer: Install with long dimension perpendicular to resilient channels. Attach to the resilient channels using 1-1/4 inch (32-mm) Type S drywall screws at 12 inches (305 mm) on center. The end joints of the wallboard must be staggered.
   b) Face Layer: Install with long dimension perpendicular to resilient channels. Attach to the resilient channels through the base layer using 1-5/8-inch (41-mm) Type S drywall screws spaced at 12 inches (305 mm) on center. The longitudinal joints of this layer must be offset 24 inches (610 mm) from those of the base layer. Additionally, face layer end joints are attached to the base layer with 1-1/2 inch (38-mm) Type G drywall screws at 8 inches (203 mm) on center placed 1-1/2 inches (38 mm) either side of the joint.
   c) Finish: The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

Pacific Woodtech Corporation Assembly PWI1.9
One-Hour Fire Resistance Rated Floor/Ceiling Assembly*
†
This fire resistance design is listed in accordance with the ASTM E119 and CAN/ULC S101
52Plus/PWI 52S, and LPI 56/PWI 56L I-Joists

A. BASIC ASSEMBLIES
1) Floor Topping (Optional): Varies (reference sound ratings if applicable).
2) Floor Sheathing: Min. 23/32-inch (18-mm) T&G Wood Structural Panel. A construction adhesive must be applied to the top of
the joists prior to placing sheathing. The sheets shall be installed with their long edge perpendicular to the joists with end joints
centered over the top flange of joists. Floor sheathing must be installed per code requirements.
3) Insulation: Min. 3-1/2-inch (89-mm) Fiber Glass Insulation (R13). Installed adjacent to the bottom flange of the I-joist and
supported by the resilient channels.
4) Structural Members: Min. 9-1/2-inch (241-mm) Deep I-Joists. Max. 24 inches (610 mm) on center spacing. Min. flange
thickness of 1-1/2 inches (38 mm) and each flange area of at least 3.75 inches² (2,419 mm²). Min. web thickness of 3/8 inch
(9.5 mm).
5) Resilient Channels: Min. 0.019-inch (0.5-mm) Galvanized Resilient Channels. Attached perpendicular to the bottom flange of
the I-joist with 1-1/4-inch (32-mm) Type W drywall screws. Channels are spaced a max. of 16 inches (406 mm) on center, are
doubled at each wallboard end joint, and extend to the next joist beyond each joint.
6) Ceiling: One layer of 3/4-inch (19-mm) Type X Gypsum Wallboard with a minimum weight of 3.0 lb/ft² (14.6 kg/m²) in
compliance with ASTM C1396. Installed with long dimension perpendicular to resilient channels and fastened with min. 1-1/8-
inch (29-mm) Type S drywall screws spaced at 8 inches (203 mm) on center, and 1 inch (25 mm) from wallboard edges and 1-
1/2 inches (38 mm) from wallboard ends. The end joints of the wallboard must be staggered.
   a) Finish: The face joints must be covered with tape and coated with joint compound. Screw heads must also be covered with
   joint compound.

Pacific Woodtech Corporation Assembly PWI2.1

Two-Hour Fire Resistance Rated Floor/Ceiling Assembly*

This fire resistance design is listed in accordance with the International Building Code (IBC) and American Wood Council's Design for Code Acceptance (DCA) 3

Min. 9-1/4 inches (235 mm) Deep: LP1 18/PWI 18S, LP1 20Plus/PWI 20S, LP1 32Plus/PWI 32S, LP1 36/PWI 36L, LP1 42Plus/PWI 42S, LP1 52Plus/PWI 52S, and LP1 56/PWI 56L I-Joists

A. BASIC ASSEMBLIES

1) Floor Topping (Optional): Varies (reference sound ratings if applicable).
2) Floor Sheathing: Min. 23/32-inch (18-mm) T&G Wood Structural Panel. The sheets shall be installed with their long edge perpendicular to the joists with end joints centered over the top flange of joists. Floor sheathing must be installed per code requirements.
3) Insulation: Min. 3-1/2-inch (89-mm) Unfaced Glass Fiber Insulation. Friction fitted between I-joists and supported by stay wires spaced 12 inches (305 mm) on center along the top of the I-joist bottom flange.
4) Structural Members: Min. 9-1/4 inches (235 mm) Deep I-Joists. Max. 24 inches (610 mm) on center spacing. Min. flange thickness of 1-1/2 inches (38 mm) and each flange area of at least 2.25 inches² (1,452 mm²). Min. web thickness of 3/8 inch (9.5 mm).
5) Furring Channels: Min. 0.0179-inch (0.45-mm) Hat Shaped Galvanized Steel Channels attached perpendicular to the bottom flange of the I-joist with 1-5/8-inch (41-mm) Type S drywall screws penetrating through the wallboard base layer into each I-joist flange. Channels are spaced a max. of 16 inches (406 mm) on center, are doubled at each base layer wallboard end joint, and extend to the next joist beyond each joint.
6) Ceiling: Three layers of 5/8-inch (16-mm) Type C Gypsum Wallboard.
   a) Base Layer: Install with long dimension perpendicular to joist length. Attach to the bottom flange of the joists using 1-5/8-inch (41-mm) Type S drywall screws at 12 inches (305 mm) on center. The end joints of the wallboard must be centered on the bottom flange of the I-joist and must be staggered.
   b) Middle Layer: Attached to furring channels using 1-inch (25-mm) Type S drywall screws at 12 inches (305 mm) on center with the long dimension perpendicular to furring channels. End joints must be staggered from end joints of adjacent sheets and end joints on the face layer.
   c) Face Layer: Attached to furring channels through the middle layer using 1-5/8-inch (41-mm) Type S drywall screws spaced at 8 inches (203 mm) on center with long dimension perpendicular to furring channel. End joints must be staggered from end joints of adjacent sheets and staggered from end joints on the middle layer. End joints (long dimension) must be offset 24 inches (610 mm) from those of the middle layer.
   d) Finish: The face layer joints must be covered with tape and coated with joint compound. Screw heads must also be covered with joint compound.

Fire Protection of Floors (FP-11) for Compliance with 2012 IRC Section R501.3 and 2015, 2018 and 2021 IRC Section R302.13

Fire Protection: 7/16 or Thicker Wood Structural Panel for Web Protection

7/16 in. (11 mm) or Thicker Wood Structural Panel for Web Protection (a,b,d)

Installation Requirements at Web Holes

Crawl Space Exception (b)
In accordance with Exception 2 of the 2012 IRC Section R501.3 and 2015/2018/2021 IRC Section R302.13, floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances do not require wood structural panel fire protection.

Automatic Sprinkler Exception (c)
In accordance with Exception 1 of the 2012 IRC Section R501.3 and 2015/2018/2021 IRC Section R302.13, floor assemblies located directly over a space protected by an automatic sprinkler system do not require wood structural panel fire protection.

(Continued next page)
(A) Floor sheathing: Materials and installation in accordance with 2012, 2015, 2018, and 2021 IRC Section R503.
(B) I-joist: Installation in accordance with Section 4.0 of this report. Maximum 24 inches (610 mm) on center spacing. Minimum flange size of 1-1/2 inches (38 mm) thick x 2-1/2 inches (63 mm) wide. Minimum web thickness of 3/8 inch (9.5 mm).
Adhesives used shall be as described in the quality manual approved by APA. At each hole location, the 7/16 in. (11 mm) or thicker wood structural panels (WSP) shall be cut with the web hole on both sides of the I-joist to allow the passage of a wire, pipe, or duct, in accordance with the web hole requirements permitted in the I-joist product report.
(C) Wood structural panel for web protection: Min. 7/16 Performance Category in compliance with DOC PS 1 or PS 2. The WSP shall continuously cover the entire length of the I-joist web on both sides. The panel-to-panel joints shall be tight with a joint gap of 1/16 inch (1.6 mm) or less and not required to be finished with tape or joint compound. Fasteners: Each WSP shall be fastened with 2 rows of 1/2 inch x 1 inch (12.7 mm x 25.4 mm) construction staples at 9 inches (229 mm) on center and 1 inch (25.4 mm) from the flange edge. Fasteners may be staggered from top to bottom. At hole location, fasteners shall be installed 1 inch (25.4 mm) from the edge of the hole, top and bottom.
(D) Automatic sprinkler system: System in accordance with Section P2904 of the 2012, 2015, 2018 and 2021 IRC, NFPA 13D, or other equivalent sprinkler systems.

Notes:
(a) In accordance with Exception 3 of 2012 IRC Section R501.3 and 2015/2018/2021 IRC Section R302.13, portions of floor assembly can be unprotected when complying with the following:
   1) The aggregate area of the unprotected portions shall not exceed 80 square feet (7.4 m²).
   2) Fire blocking in accordance with 2012, 2015, 2018, and 2021 IRC Section R302.11.1 shall be installed along the perimeter of the unprotected portion to separate the unprotected portion from the remainder of the floor assembly.
(b) Insulation may be required for energy code compliance purposes. Check with the local building official for specific jurisdictional requirements.
(c) In accordance with 2012, 2015, 2018, and 2021 IRC Section P2904, partial residential sprinkler systems are permitted to be installed only when the entire dwelling unit is not required to be equipped with a residential sprinkler system. Check with the local building official for specific jurisdictional requirements.
(d) Penetrations or openings for ducts, vents, electrical outlets, lighting, devices, luminaires, wires, speakers, drainage, piping and similar openings or penetrations shall be permitted.

1) Rim assembly for fire from inside of structure.
2) Gypsum wallboard shown on the ceiling is to protect the Rim Board only. It does not necessarily cause the floor assembly to be rated.
3) Attach 1-layer Type X (1/2 or 5/8-inch) gypsum wallboard to Rim Board with 1-1/2-inch Type W drywall screws spaced 12 inches o.c.
4) Attach 2-layer Type X (1/2 or 5/8-inch) gypsum wallboards to Rim Board with 2-inch Type W drywall screws spaced 12 inches o.c.
5) Provide min. 1-3/4-inch bearing for I-joist.
6) Use only fire rated gypsum wallboard. Type C may be substituted for Type X.
7) Rim Board and gypsum wallboard thickness are shown as minimums. Thicker Rim Board and gypsum wallboard may be substituted.
8) When 2-layer gypsum wallboards are used, I-joist end nails shall be 16d box (0.135 inch x 3-1/2 inches) nails.
9) Rim board shall be sized for vertical and lateral loads.
10) Stud size may be reduced if the gypsum protection is discontinuous, provided that other requirements in the code are satisfied.

1) Rim assembly for fire from either side of wall.
2) Gypsum wallboard shown on the ceiling is to protect the Rim Board only. It does not necessarily cause the floor assembly to be rated.
3) Attach 1-layer Type X (1/2 or 5/8-inch) gypsum wallboard to Rim Board with 1-1/2-inch Type W drywall screws spaced 12 inches o.c.
4) Attach 2-layer Type X (1/2 or 5/8-inch) gypsum wallboards to Rim Board with 2-inch Type W drywall screws spaced 12 inches o.c.
5) Provide min. 1-3/4-inch bearing for I-joist.
6) Use only fire rated gypsum wallboard. Type C may be substituted for Type X.
7) Rim Board and gypsum wallboard thickness are shown as minimums. Thicker Rim Board and gypsum wallboard may be substituted.
8) Toe nailing from the I-joist flange to the rim is permitted. When 2-layer (or more) gypsum wallboards are used, I-joist end nails shall be 16d box (0.135 inch x 3-1/2 inches) nails.
9) Rim board shall be sized for vertical and lateral loads.
10) Stud size may be reduced if the gypsum protection is discontinuous, provided that other requirements in the code are satisfied.
